

US Debt Ceiling Crisis and US Federal Government Shut down Explained

Last article from ClearIAS.com discussed about [Sub-prime crisis and Fiscal Cliff](#). Things didn't end there for US economy. There were other problems to handle. The next two major categories of economic issues were (1) US debt ceiling crisis and US Federal Government Shutdown (2) Quantitative Easing and Federal Tapering. Let's discuss US Debt Ceiling Crisis and US Federal government shut down in this post and discuss Quantitative Easing in another article. So, straight to the topic.

US Debt Ceiling Crisis

Do you remember that Fiscal Cliff was rather a technical and policy issue rather than an economic issue? Do you remember the date December 31, 2012? On the same date another related but different problem was creating trouble for the US government. This crisis too was related with bills. And the name of the crisis : US Debt Ceiling Crisis.

Back to Fiscal Cliff Crisis

Fiscal Cliff became a highlighted issue because of the provisions mentioned in the following bills.

1. [2010 Tax Relief Act](#).
2. [Budget Control Act of 2011](#).

And the fiscal cliff crisis was partially solved with the passage of [American Taxpayer Relief Act of 2012](#) on Jan 1, 2013. This meant that there was a

compromise that taxes should not be increased beyond a limit and there should not be excessive cuts on public expenditure. But this compromise had another problem – the debt ceiling – associated with it. That too, a self imposed, technical and policy issue.

\$1 trillion-plus annual budget gap of US!

Hope you are now clear with the fact that economic condition of US is not very good. \$1 trillion-plus is the US annual budget gap (A figure which is around India's GDP). Too much budget deficit is not good for any economy. The risk of reduction of credit rating always exist. Also there are more chances of populism. So Budget Control Act of 2011 imposed restrictions on the debt limit of US government. And that value was 16.399 trillion dollars.

Can you think of any way of reducing the \$1 trillion-plus US annual budget deficit? The usual way out is either increase tax or reduce spending. But this contradicts with the compromise on Fiscal Cliff crisis. Besides, the two houses of US congress, are on two different pages, creating a dead lock. So what to do then?

What was needed to solve Fiscal Cliff crisis was directly antagonistic to the solution of US debt ceiling crisis. So it turned out that the solution to resolve US debt ceiling crisis was not to reduce the debt; but rather increase or suspend the debt ceiling limit itself!

[Source: My own quote : For your understanding!]

What is Debt ceiling? Who sets this figure?

- The limit is set by Congress. United States will not be able to borrow any more money if it cross the debt ceiling and would, in theory, be forced to slash spending to make ends meet.
- The debt limit does not control or limit the ability of the federal government to run deficits or incur obligations. Rather, it is a limit on the ability to pay obligations already incurred. It does not prohibit Congress from creating further obligations upon the United States. The ceiling was last set at \$16.4 trillion in 2011.
- Possible, but desperate, remedies would include halting pay to the military, retirement health benefits, social security, and failing to pay government debts.
- The US will not default on its own debt immediately. The Treasury has various extraordinary measures in its armory, including halting the issuance of securities to state and local governments, which could buy about two months of leeway. After
- the passing in early January 2013 of the American Taxpayer Relief Act of 2012 to avert the projected fiscal cliff, political attention shifted to the debt
- ceiling. The debt ceiling had technically been reached on December 31, 2012, when the Treasury Department commenced “extraordinary measures” to enable the continued financing of the government.

United States Federal Government shut down

From October 1 through 16, 2013, the **United States federal government entered a shutdown** and curtailed most routine operations after Congress failed to enact legislation appropriating funds for fiscal year 2014, or a continuing resolution for the interim authorization of appropriations for fiscal year 2014. Regular government operations resumed October 17 after an interim appropriations bill was signed into law. There was conflict of interest on the Patient Protection and Affordable Care Act (commonly known as “Obamacare”) between Democrats and Republicans.

The 16-day-long shutdown of October 2013 was the third-longest government shutdown in U.S. history, after the 18-day shutdown in 1978 and the 21-day 1995–96 shutdown.

US Government shut down was rather a budget issue appropriation issue for the new fiscal year. It was connected with US debt ceiling, but shut-down issue was a short term one (connected only with the spending for next fiscal), but debt ceiling a long term problem (connected with the long term borrowing limit.)

[Relate the Shut-down issue with a case like Indian Budget got passed in Loksabha but not in Rajyasabha; Debt ceiling can be related with the provisions of the FRBM act which places restrictions on the Fiscal Deficit]

Solutions to US Debt Ceiling Crisis and US Shut down

Solution tried = Suspend the debt ceiling!

- The 2013 crisis began in January 2013 and ended on October 17, 2013 with the passing of the Continuing Appropriations Act, 2014, though the debate continues.
- On October 16, the Senate passed the Continuing Appropriations Act, 2014, a continuing resolution, to fund the government until January 15, 2014, and **suspending the debt ceiling** until February 7, 2014, thus ending both the United States federal government shutdown of 2013 and the United States debt-ceiling crisis of 2013.
- On January 14, 2014, the House and the Senate Appropriations Committees agreed on a spending plan that would fund the federal government for two years.
- On January 16, 2014, Congress passed a \$1.1 trillion appropriations bill that will keep the federal government funded until October 2014. (Short-term solution). Congress
- still needs to address the debt ceiling issue.
